

HCL AppScan 360°

Unified application security, visibility, and risk management. Versatile, scalable, and deployable anywhere.

HCL AppScan

Overview

HCL AppScan 360° is a single, unified platform for all your application security needs. Make the move to modern DevSecOps processes with continuous security, effective risk management and compliance. This comprehensive set of testing and remediation solutions is designed to seamlessly integrate into modern software delivery pipelines and enable developers, DevOps and security teams to quickly and accurately find and fix vulnerabilities without slowing release schedules. This containerized solution is built on cloud-native architecture and provides multiple secure deployment options to support your organization's unique requirements.

Benefits

Scalable By Design

No matter your size, industry, or tech stack — we offer scalable solutions that easily evolve with your organization.

Complete Open-source Visibility

Gain real-time visibility into risks and generate SBOMs with the industry's only on-prem platform/technology suite that includes SCA — all without going to the internet.

Fix Fast, Fix Smart

No more guesswork. Our actionable reports give clear, prioritized remediation steps for many common vulnerabilities — saving your team time and headaches.

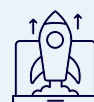

Flexible Policy Management

Align security with development by customizing policies to meet your priorities, regulatory needs, and industry standards — all without slowing you down.

Stay Compliant, Stay Confident

Quickly meet top regulatory benchmarks like PCI DSS, HIPAA, OWASP Top 10, SANS 25, DISA STIG, and more — with reports that make compliance simpler and easier.

Deploy Anywhere

Whether you're fully on-prem, in a private cloud, public cloud or use a hybrid solution — options to secure your apps without overhauling your infrastructure.

Features

Reduce Your Risk with Centralized Visibility

Application security isn't just about finding vulnerabilities—it's about managing risk. HCL AppScan 360° gives you full visibility of all scan results (DAST, SAST, IAST, SCA, API, IaC, Secrets), testing status, and remediation progress on a centralized dashboard so that you can automate earlier testing, prioritize remediation and enforce customizable policies across the SDLC.

Elevate Your Security with AI Innovation

HCL AppScan 360° helps you focus on the scan results that matter most with advanced AI capabilities in both SAST and DAST testing that deliver deeper scan coverage and radically reduce false positives. Additionally, get secure code fixes for your SAST results directly in your workflow with GenAI generated context and summaries. Our self-contained GenAI ensures your proprietary code never leaves your environment.

Prove Exploitability with Auto-Issue Correlation

Correlate scan results from IAST, DAST and SAST and group related vulnerabilities for more streamlined remediation. Correlation lets you enrich DAST results with SAST/IAST findings, and both prove the exploitability of SAST issues and confirm SAST fixes with DAST/IAST results.

Secure Open-source Components with On-prem Deployment

HCL AppScan 360° includes on-prem SCA with SBOM capabilities without exposing your data to the internet. An automated updater provides access to up-to-date open-source component vulnerability data, licenses and dependencies along with zero downtime for regular CVE updates, major CVE patches, and quarterly product upgrades.

Reduce Security Blind Spots with Improved API Scanning

Secure your APIs more effectively and efficiently by scanning them early in the development process with the entire suite of technologies. With DAST you can upload OpenAPI specification files, Postman collections, or manually record traffic to automatically detect vulnerabilities in every phase of the software development lifecycle.

Integrate and Automate Security Throughout Your Pipeline

For a truly frictionless DevSecOps experience, HCL AppScan 360° offers a broad and growing range of integrations across IDEs, CI/CD tools, SCMs, defect tracking systems, vulnerability management platforms, client utilities—enabling seamless application security testing within your development, build, and issue management workflows.

Find and Fix Vulnerabilities with Speed and Confidence

SAST

Static Application Security Testing analyzes your source code to identify potential vulnerabilities throughout the entire SDLC

- AI-enabled accuracy and scan depth
- 35+ programming languages supported
- Curated fixes with GenAI context and summaries

SCA

Software Composition Analysis scans open-source components for known vulnerabilities, licenses, and dependencies and protects your software supply chain.

- SBOM generation for all compliance needs
- Auto-updater to access vulnerability data without exposing your data to the internet

DAST

Dynamic Application Security Testing crawls your webapps and APIs and executes targeted tests to find vulnerabilities.

- Industry's widest rules and compliance checks
- Integrated design for Developers and Security
- AI-enabled accuracy
- Test Optimization for speed

IAST

Interactive Application Security Testing monitors your apps and provides visibility into both source code and runtime behavior.

- Auto-Issue Correlation with DAST and SAST
- Patented Java and .Net deployment solutions

About HCLSoftware

HCLSoftware is a global leader in software innovation and the software division of HCLTech. We develop, market, sell, and support transformative solutions across business and industry, intelligent operations, total experience, data and analytics, and cybersecurity. We deliver best-in-class software products that empower organizations to achieve their goals. HCLSoftware serves more than 20,000 organizations, including a majority of the Fortune 100 and almost half of the Fortune 500.
